Junyu Li

Statistics undergraduate | Machine learning, decisions & optimization

ljylikezmn999@gmail.com | b1ue13e.github.io

GitHub: b1ue13e | ORCID: 0009-0006-7574-4292

EDUCATION

Anhui University of Finance and Economics

Undergraduate study in Statistics, in progress. Bengbu, Anhui, China.

RESEARCH INTERESTS

Machine learning and operations research, with an emphasis on sequential decision-making, feedback, and optimization. Current interests include inference-time computation, adaptive agents, preference learning, representation dynamics, and reliable temporal learning.

RESEARCH EXPERIENCE

Singapore Management University

Research Assistant | Present

Working with Zhiguang Cao on automated research.

PROFESSIONAL EXPERIENCE

Huaan Futures

Internship | Aug 2026

Galvani Capital

Internship | 2024 - 2025

Conducted mixture-of-experts (MoE) pruning experiments, built PyTorch training and evaluation workflows, and studied out-of-distribution generalization.

RESEARCH COLLABORATIONS

NEOMA Business School

Remote research collaboration | Aug 2026 - present

Collaborative work on interactive AHP consistency, sequential FlowSort feedback, and strategic bilevel multi-criteria decision support. Contributing to study implementation, analysis, and manuscript development.

Data Analytics Lab · CEFET/RJ

Research collaboration | Sep 2026 - present

Developing an independent research direction on misspecified forecasting priors, adaptation debt, and the target evidence needed for recovery, with academic guidance from Eduardo Ogasawara and discussion with the TFFormer team.

ICMC · University of São Paulo

Remote research collaboration | Aug 2026 - present

Working with Steve Ataucuri Cruz following an introduction by Alneu de Andrade Lopes. The project studies when corrupted SCADA measurements can be distinguished from real turbine operating changes, with reproducible regression, residual, and cross-site validation studies.

NYU Stern · research project exchange

Project-based research & replication | Sep 2026 - present

Introduced by Zhengyuan Zhou to his PhD student Sharon Wang for a concrete replication task on GPU-accelerated inventory optimization. Local work focuses on dynamic programming and perishable-inventory decision problems.

SELECTED OPEN-SOURCE WORK

Kronos Hub. Forecasting, multi-agent research, execution and backtesting API.
github.com/b1ue13e/kronos-hub

Ultra-LSNT. Wind-power forecasting under corrupted SCADA.
github.com/b1ue13e/Ultra-LSNT

PAPERS & MANUSCRIPTS

01. Are Inconsistent Decisions Better? Revisiting Analytic Hierarchy Process Consistency through Interactive Advice and Behavioural Validation

Junyu Li, Alessio Ishizaka

Journal of the Operational Research Society · submitted November 2026

02. A weight-repair algorithm for FlowSort: incorporating feedback while retaining existing assignments

Junyu Li, Alessio Ishizaka

Manuscript under coauthor review | 2026

03. When Familiarity Loses Its Edge in Linear Probing

Junyu Li, Zhongtian Sun

Working manuscript | 2026

04. Cost Forecasting for Budgeted Selective Reasoning

Working manuscript | 2026

05. Fix One, Break Many: Predicting the Spillover of Natural-Language Feedback in Adaptive Agents

Working manuscript | 2026

06. Truthful Feedback Selection Accelerates Decision Regressions in Bounded Soft Repair

Working manuscript | 2026

07. When do historical power curves improve wind power commitments?

Junyu Li, Juntao Du

Working manuscript | 2026

Research code

08. Current Power as Incremental Telemetry for Wind Power Reserve Decisions

Junyu Li, Juntao Du

Working manuscript | 2026

Research code
